

ARK: ACTIVE RESPONSE KIT

ARK: Everything you need to deploy reactive targetry in real-world environments.

CHECK OUT ARKs on YouTube HERE:

In support of our military and law enforcement trainers we're closing the gap between training and real world encounters. ARK kits are specifically designed to meet this challenge by being ultra-portable, versatile, and ideal for scenario based training in real-world environments.

From vehicle-based rapid range deployments and line-of-fire training to live environment SIMs training events, the AutoTargets ARK packages are quick to deploy, proven reliable with over a decade of use in LE and MIL applications and enable trainers to develop, gather, assess and disseminate training data with the press of a button.
